# Project: SQL for Data Analysis

## Project Introduction

For this project, you will indulge in **Query a Musical Store Database** and perform the below task:

## Presentations

You are now on the portion of the project you will need to submit to a reviewer. To pass this project follow the below instructions to create a presentation.

Your presentation should include:

- Four slides using PowerPoint or PDF
- One visualization per slide
- A 1-2 sentence explanation of each slide
- The SQL query used to create the data used in the visualization.

## Note:

- Each SQL query needs to include one or more explicit **JOIN**. The **JOIN** or **JOINs** should be necessary to the query.
- Each SQL query needs to include one or more aggregation. This could be a **COUNT**, **AVG**, **SUM**, or other aggregation.
- You must create at least 4 unique SQL queries in your submission.
- All visualizations should make logical sense and provide accurate information about the indicated area.
- A PDF report has been uploaded and a .txt file with the queries has been uploaded in a single zipped folder file.
